Document identifier:	D1_1_V5.doc
Version:	1.0
Date:	25/04/2004
Organisation:	Arteveldehogeschool
Deliverable:	D1.1
Milestone:	M1. A detailed scheme for a multi centre trial, including all clinical, technical and user requirements
Workpackage:	1
Task:	-
Dissemination:	Public
Authors:	Jo Van Vaerenbergh, all partners
External Review	Prof .dr. FCJ.Baro Neuropsychiatry WHO Collaborating Centre for Health. Psychological and Psychobiological Factors

Resume

The activities and measures applied for the methodology for multi centre trial carried out in the ALLADIN project are described in this deliverable.

The methodology contains the detailed scheme for a multi centre trial, including all clinical, technical and user requirements

Table of contents

D1.1: Methodology for multi centre trial 1
Resume 2
1. The research question 6
1.1. Facts and theories on outcome measurement in stroke 6
1.1.1. Clinical experience leading to ALLADIN 6
1.1.2. Theory and literature leading to the conceptual design of ALLADIN 7
1.2. Target population 10
1.2.1. Characteristics 10
1.2.2. Limitations 10
1.3. The rationales for ALLADIN 10
1.4. Variables 11
1.4.1. Activities of Daily Living – Choice of tasks 11
1.4.2. Conceptual design of the ALLADIN diagnostic device 14
1.4.2.1. Isometric force/torque measurements 14
1.4.2.1.1. State of the art of isokinetic/isometric measurements 14
1.4.2.1.1.1 Isostation B-200 15
1.4.2.1.1.2 Loredan/LIDO 15
1.4.2.1.1.3 Kin/Com 16
1.4.2.1.1.4 Biodex – Upper Body Cycle 17
1.4.2.1.1.5 NORM 18
1.4.2.1.1.6 Cybex TEF / TR / LT 18
1.4.2.1.1.7 Newtest 19
1.4.2.1.1.8 Conclusion 19
1.4.2.1.2 Functional requirements of the ALLADIN diagnostic device 20
1.4.2.1.3 Design requirements of the ALLADIN diagnostic device 21
1.4.2.1.4 Safety requirements and medical certification requirements 22
1.4.2.2. Force/torque (FT) measurement system 24
1.4.2.2.1 Preliminary isometric FT measurements at the trunk and at the lower arm 24
1.4.2.2.2 Requirements for the finger sensors 30
1.4.2.2.3 Requirements for the foot and toe sensors 31
1.4.2.2.4 Selection of the FT measurement system 32
1.4.2.3. Anthropometric design 33
1.4.2.3.1 Design data 33
1.4.2.3.2 Terminology of the anatomical angles 34
1.4.2.3.3 Anatomical angles of the selected ADL tasks 38
1.4.2.4. Operational definitions including delineation of tools and procedures 44
1.4.2.4.1 Upper extremities 45
1.4.2.4.1.1 The finger device 45
1.4.2.4.1.2 The arm device 49
1.4.2.4.2 Trunk 50
1.4.2.4.3 Fundament 51
1.4.2.4.4 Lower extremities 52
1.4.2.5. The concept of the ALLADIN Diagnostic Device 56
1.4.2.5.1 Problems associated with the anthropometric constraints 56
1.4.2.5.2 The integrated ADD 58
1.4.2.5.2.1 ADD set to Position 1 58
1.4.2.5.2.2 ADD set to Position 2 58
1.4.2.5.2.3 ADD set to Position 3 59

1.4.2.5.3 Envisaged scenario 60
1.4.2.5.3.1 Patient entry to the ALLADIN Diagnostic Device 61
1.4.2.5.3.2 Isometric FT measurements of the selected ADL tasks 63
1.4.2.5.3.3 Patient exit from the ALLADIN diagnostic Device 65
1.4.2.5.3.4 Cycle time study 66
1.4.3. Scales 67
1.4.4. Natural Language Descriptions and audio recording 68
1.4.4.1. Operational definitions including delineation of tools and procedures 68
1.4.4.2. Audio recording 68
1.5. Hypotheses, specific aims and final purpose 70
1.5.1. Reliability and validity 70
1.5.1.1. Reliability and validity of the ALLADIN diagnostic device 70
1.5.1.2. The used scale(s) 77
1.5.1.2.1 Motor Capacity Assessment: the Fugl Meyer Scale (Lindmark adaptation) 77
1.5.1.2.2 Motor Assessment Scale 78
1.5.1.3. Natural Language Descriptions 78
1.5.2. Characterization of clinical phenomena or existing conditions 79
1.5.2.1. The ALLADIN diagnostic device 79
1.5.2.2. The used scale 80
1.5.2.3. Natural Language Descriptions 80
1.5.3. Exploration of relationships 80
2. Sampling 81
2.1. Sample bias 81
2.1.1. Sample size calculation and Power 81
2.1.2. 84
2.1.3. Over and under representation 84
2.2. Accessible or experimental population 85
2.2.1. Consecutive sampling and length of study 85
2.2.2. Inclusion criteria in ALLADIN 85
2.2.3. Exclusion criteria in ALLADIN 85
2.3. Subject selection and recruitment by personal contact in clinical setting 85
2.3.1. The Maria Middelares Hospital (Gent, Belgium) 86
2.3.2. SJH/AMNCH (Dublin, Ireland), ... 87
2.3.3. Szent János Hospital(Budapest, Hungary). 88
2.4. Guidelines for patient handling at AHS, TCD and NIMR 90
3. Experimental control 93
3.1. Confounding influence 93
3.1.1. Extrinsic factors 93
3.1.2. Intrinsic factors 93
3.1.3. Testing effects 93
3.1.4. Reactive measurements 93
3.1.5. Instrumentation effects 93
3.2. Blinding 94
4. Experimental design 94
4.1. Measurement of variables 94
4.2. Individual measurement sessions 95
4.3. Direct subject hours and the total number of participants 95
4.4. Measurement cycles, number of measurements 95
5. Data Management 96

5.1. Data acquisition 96
5.2. Data coding 96
5.3. Data entry (preliminary data) 97
5.3.1. Human machine interface for the patient 98
5.3.1.1. Instructions, video for patients 98
5.3.2. Human machine interface for the operator 98
5.3.2.1. Isometric measurements 98
5.3.2.2. Audio recording 98
5.3.2.2.1. Pilot recordings free descriptions 98
5.3.2.4.2. Pilot recordings of expression used in physiotherapy 99
5.4. Data processing 104
5.5. Data Storage 114
5.5.1. The data storage architecture 114
5.5.2. Local database at the clinical sites 116
5.5.3. The central project database 119
5.5.4 Local storage at the information processing partners 121
5.5.5 Replication (Database synchronization) 121
Appendix 124
ALLADIN project DATA ENTRY 124
5.6. Interim reports 133
5.6.1. Responsibility 134
5.6.2. Influence on protocol 134
Reference List 135
